

# Which Ingredient Do You Order Only Once?

## Bākalon®

Bākalon is our name for the pans with the durable, dark gray hard coat anodized surface...pans that will not chip, peel, rust, or interact with food. In fact, the Bākalon surface is not a coating but a surface of aluminum oxide, tough enough to resist the use and abuse of commercial kitchens. A perfect bake can be achieved everytime because the dark colored surface

absorbs radiant heat, allowing even faster baking times at lower temperatures. And after "seasoning", a little oil on the surface will keep food from sticking and make clean-up a snap.

Order the other ingredients as often as needed but order Bākalon only once! For more information contact your pan supplier or call Chicago Metallic. Since 1898.

**Bākalon** is our brandname for the high strength aluminum pans with the durable, dark gray, hard-coat anodized surface...pans that will not chip, peel, rust, or interact with food. The **Bākalon** surface is not a painted "coating", but an integrated surface of aluminum oxide, tough enough to resist the use and abuse of commercial kitchens. A perfect bake can be achieved every time because the dark color of its surface absorbs radiant heat in the oven, rather than reflecting it. This allows even faster baking times at lower temperatures. And after seasoning, a little oil on the surface will keep food from sticking, making clean-up a snap. **Bākalon, the pizza ingredient you order only once!**
